

WHAT IS CLAIMED IS:

1. A protein having any one of the following amino acid sequences:
- (a) an amino acid sequence represented by Sequence ID No. 1;
 - (b) an amino acid sequence comprising an amino acid substitution occurring at a part corresponding to a part of an amino acid sequence represented by Sequence ID No. 1;
 - (c) an amino acid sequence of a protein capable of converting acetophenone to an optically active 1-phenylethylamine in the presence of a racemic mixture of sec-butylamine, said amino acid sequence showing an amino acid identity with the amino acid sequence represented by Sequence ID No. 1 of 60% or higher;
 - (d) an amino acid sequence of a protein capable of converting acetophenone to an optically active 1-phenylethylamine in the presence of a racemic mixture of sec-butylamine and having a molecular weight of about 37 kDa as a monomer, said amino acid sequence showing an amino acid identity with the amino acid sequence represented by Sequence ID No. 1 of 80% or higher; and,
 - (e) an amino acid sequence of a protein capable of converting acetophenone to an optically active 1-phenylethylamine in the presence of a racemic mixture of sec-butylamine and derived from a microorganism belonging to the genus *Mycobacterium*, said amino acid sequence showing an amino acid identity with the amino acid sequence represented by Sequence

ID No. 1 of 60% or higher.

2. A protein having an amino acid sequence represented by Sequence ID No. 1.

3. A protein having an amino acid sequence comprising an amino acid substitution from threonine to alanine occurring at a position corresponding to amino acid's position No.2 of an amino acid sequence represented by Sequence ID No. 1;

4. A protein having a molecular weight of about 37 kDa as a monomer which is obtainable from *Mycobacterium aurum* SC-S423 and which is capable of converting acetophenone to an optically active 1-phenylethylamine in the presence of a racemic mixture of sec-butylamine.

5. A gene encoding a protein having any one of the following amino acid sequences:

(a) an amino acid sequence represented by Sequence ID No. 1;

(b) an amino acid sequence comprising an amino acid substitution occurring at a part corresponding to a part of an amino acid sequence represented by Sequence ID No. 1;

(c) an amino acid sequence encoded by the nucleotide sequence of nucleotide's positions No. 1 to No. 1017 in the nucleotide sequence represented by Sequence ID No. 2;

(d) an amino acid sequence of a protein capable of converting acetophenone to an optically active 1-phenylethylamine in the presence of a

racemic mixture of sec-butylamine, said amino acid sequence showing an amino acid identity with the amino acid sequence represented by Sequence ID No. 1 of 60% or higher;

(e) an amino acid sequence of a protein capable of converting acetophenone to an optically active 1-phenylethylamine in the presence of a racemic mixture of sec-butylamine and having a molecular weight of about 37 kDa as a monomer, said amino acid sequence showing an amino acid identity with the amino acid sequence represented by Sequence ID No. 1 of 80% or higher; and,

(f) an amino acid sequence of a protein capable of converting acetophenone to an optically active 1-phenylethylamine in the presence of a racemic mixture of sec-butylamine and obtainable from a microorganism belonging to the genus *Mycobacterium*, said amino acid sequence showing an amino acid identity with the amino acid sequence represented by Sequence ID No. 1 of 60% or higher.

6. A gene having any of the following nucleotide sequences:

(a) a nucleotide sequence of nucleotide's positions No. 1 to No. 1017 in the nucleotide sequence represented by Sequence ID No. 2; and,

(b) a nucleotide sequence comprising a nucleotide substitution from adenine to guanine occurring at a position corresponding to nucleotide's position No.4 of a nucleotide sequence of nucleotide's positions No. 1 to 1017 in the nucleotide sequence represented by Sequence ID No. 2;

10067291.020702

(c) a nucleotide sequence of about 1020 bp which is amplified by PCR using as primers an oligonucleotide having the nucleotide sequence of nucleotide's positions No. 1 to 28 in the nucleotide sequence represented by Sequence ID No. 2 or an oligonucleotide having the nucleotide sequence represented by Sequence ID No. 11, and an oligonucleotide having a complementary nucleotide sequence to the nucleotide sequence of nucleotide's positions No. 999 to 1020 in the nucleotide sequence represented by Sequence ID No. 2 and as a template a chromosome DNA derived from a microorganism belonging to the Mycobacterium and which encodes a protein capable of converting acetophenone to an optically active 1-phenylethylamine in the presence of a racemic mixture of sec-butylamine.

7. A gene having a nucleotide sequence of nucleotide's positions No. 1 to 1017 in the nucleotide sequence represented by Sequence ID No. 2.

8. A gene having a nucleotide sequence comprising a nucleotide substitution from adenine to guanine occurring at a position corresponding to nucleotide's position No.4 of a nucleotide sequence of nucleotide's positions No. 1 to 1017 in the nucleotide sequence represented by Sequence ID No. 2.

9. A gene formed by connecting a promoter capable of functioning in a host cell to the gene of Claim 5 in a functional manner.

10. A vector containing the gene of Claim 5.

11. A transformant obtainable by transducing the gene of Claim 5 into a host cell.

202020-16229001

12. A transformant obtainable by transducing the vector of Claim 10 to a host cell.

13. The transformant according to Claim 11 or Claim 12, wherein the host cell is a microorganism cell.

14. A method for producing a transformant, comprising a step of transducing the gene of Claim 5 or the vector of Claim 10 into a host cell.

15. A method for producing a protein of Claim 1, comprising a step of culturing a microorganism having the gene of Claim 5.

16. The method according to Claim 15, wherein said microorganism is the transformant of Claim 11 or 12.

17. A method for producing an optically active amino compound represented by Formula (3):

wherein X^1 is an optionally substituted C_1 - C_9 alkyl group, an optionally substituted C_6 - C_{14} aryl group, an optionally substituted C_7 - C_{17} arylalkyl group, an optionally substituted C_4 - C_{12} heteroaryl group, an optionally substituted C_5 - C_{15} heteroarylalkyl group, an amino group, an aminocarbonyl group, a hydroxyl group, a thiol group, a guanidyl group, a cyano group, a halogen atom or a hydrogen atom, R^1 is a C_1 - C_6 alkyl group, a carboxyl group, C_2 - C_6 alkyloxycarbonyl group or a hydrogen atom, m is an integer of 0 to 6,

and * is an asymmetric carbon atom with the proviso that said optically active amino compound represented by Formula (3) has the following structure represented by Formula (3a):

when R¹ is a C₁-C₆ alkyl group or a hydrogen atom and said optically active amino compound represented by Formula (3) has the following structure represented by Formula (3b):

when R¹ is a carboxyl group or C₂-C₆ alkyloxycarbonyl group, which comprises reacting a ketone compound represented by Formula (1):

wherein X¹, R¹ and m have the meanings defined above,

in the presence of an amino group-containing compound represented by Formula (2):

wherein R² is an optionally substituted C₁-C₆ alkyl group, an optionally substituted phenyl group or an optionally substituted C₇-C₁₀ phenylalkyl group, R³ is a hydrogen atom, a C₁-6 alkyl group, a carboxyl group or a C₂-C₅

alkyloxycarbonyl group with the protein of Claim 1.

18. The method according to Claim 17, wherein R¹ of the ketone compound represented by Formula (1) is a carboxyl group.

19. The method according to Claim 17, which is a method for producing an optically active amino compound represented by Formula (6):

wherein X² is an optionally substituted phenyl group or an optionally substituted naphthyl group, R⁴ is an C₁-C₆ alkyl group, and n is an integer of 0 to 4, which comprises reacting a ketone compound represented by Formula (4):

wherein X², R⁴ and n have the meanings defined above in the presence of an amino group-containing compound represented by Formula (5):

wherein R⁵ is an optionally substituted C₁-C₆ alkyl group, an optionally substituted phenyl group or an optionally substituted C₇-C₁₀ phenylalkyl group, R⁶ is a hydrogen atom, a C₁-C₆ alkyl group, a carboxyl group or a C₂-C₅ alkyloxycarbonyl group, with the protein of Claim 1.

20. The method according to Claim 17, which is a method for producing an optically active amino compound represented by Formula (8):

(8)

wherein X^4 is an optionally substituted C_6-C_{14} aryl group, an optionally substituted C_4-C_{12} heteroaryl group, an optionally substituted C_1-C_3 alkyl group, an amino group, an aminocarbonyl group, a hydroxyl group, a thiol group, a guanidyl group or a hydrogen atom, R^7 and R^8 may be the same or different and each is a hydrogen atom, a C_1-C_3 alkyl group or a hydroxyl group, p is an integer of 0 to 3 and q is an integer of 0 to 2, which comprises reacting a ketone compound represented by Formula (7):

(7)

wherein X^4 , R^7 , R^8 , p and q have the meanings defined above in the presence of an amino group-containing compound represented by Formula (2):

(2)

wherein R^2 is an optionally substituted C_1-C_6 alkyl group, an optionally substituted phenyl group or an optionally substituted C_7-C_{10} phenylalkyl group, R^3 is a hydrogen atom, a C_1-C_6 alkyl group, a carboxyl group or a C_2-C_5 alkyloxycarbonyl group, with the protein of Claim 1.

21. A method for improving the ratio of an amino compound represented by Formula (9):

wherein X^1 is an optionally substituted C_1 - C_9 alkyl group, an optionally substituted C_6 - C_{14} aryl group, an optionally substituted C_7 - C_{17} arylalkyl group, an optionally substituted C_4 - C_{12} heteroaryl group, an optionally substituted C_5 - C_{15} heteroarylalkyl group, an amino group, an aminocarbonyl group, a hydroxyl group, a thiol group, a guanidyl group, a cyano group, a halogen atom or a hydrogen atom, R^1 is a C_1 - C_6 alkyl group, a carboxyl group, C_2 - C_6 alkyloxycarbonyl group or a hydrogen atom, m is an integer of 0 to 6, and $*$ is an asymmetric carbon atom with the proviso that said amino compound represented by Formula (9) has the following structure represented by Formula (9a):

when R^1 is a C_1 - C_6 alkyl group or a hydrogen atom and said optically active amino compound represented by Formula (9) has the following structure represented by Formula (9b):

when R¹ is a carboxyl group or C₂-C₆ alkyloxycarbonyl group, which comprises reacting a ketone compound represented by Formula (14):

wherein R² is an optionally substituted C₁-C₆ alkyl group, an optionally substituted phenyl group or an optionally substituted C₇-C₁₀ phenylalkyl group, R³ is a hydrogen atom, a C₁-C₆ alkyl group, a carboxyl group or a C₂-C₅ alkyloxycarbonyl group, in the presence of an amino group-containing compound represented by Formula (13).

wherein X¹, R¹ and m have the meanings defined above, with the protein of Claim 1.

22. The method according to Claim 21, which is a method for improving the ratio of an amino compound represented by Formula (12):

wherein X⁵ is an optionally substituted phenyl group or an optionally substituted naphthyl group, R⁹ is a C₁-C₆ alkyl group and r is an integer of 0

to 4, which comprises reacting an amino group-containing compound represented by Formula (10):

wherein X^5 , R^9 and r have the meanings defined above in the presence of a ketone compound represented by Formula (11):

wherein R^{10} is an optionally substituted C_1 - C_6 alkyl group, an optionally substituted phenyl group or an optionally substituted C_7 - C_{10} phenylalkyl group, R^{11} is a hydrogen atom, a C_1 - C_6 alkyl group, a carboxyl group or a C_2 - C_5 alkyloxycarbonyl group, with the protein of Claim 1.
